SUMMARY

QA Automation Engineer with solid experience in both manual and automated testing of web applications. I am growing in the direction of Python-based automation while remaining deeply involved in exploratory and functional testing to ensure product quality from every angle.

I have experience in REST API testing, backend business logic validation, and database integrity checks in PostgreSQL using Django ORM. I'm comfortable working close to the codebase, understanding how features are implemented, and collaborating with developers to diagnose and resolve issues.

I enjoy improving testing processes, increasing coverage, and reducing manual effort by building maintainable automation

SKILLS

Testing theory • Test design techniques • Understanding of SDLC, STLC • Test artifacts creation (check-list, test case, bug reports) • Understanding of client-server architecture • Web Application testing • Mobile testing • Android Studio • Functional testing • JSON, XML • REST API testing with Postman • Newman • Charles Proxy • PostgreSQL • Chrome DevTools • YouTrack • Jira • HTML • CSS • VCS (git) • Visual Studio Code • Python • Playwright • Pytest • Docker

EXPERIENCE

Floship, Software Testing Engineer

Full-time | Oct 2023 - Present

Hong Kong, Hong Kong SAR | Remote

- Perform full-cycle manual testing for a third-party logistics platform covering shipment processing, warehouse operations, and integrations
- Test complex end-to-end business workflows across frontend, backend, and external services
- Designed and built a Python + Playwright UI automation framework from scratch to support regression and smoke testing

EDUCATION

Herzen Russian State Pedagogical University, Saint-Petersburg

09/2004 - 09/2007

Bachelor of Mathematics

COURSES

Stepik - Test Automation with Selenium and Python
([Certificate](#))

Stepik - Interactive SQL Training ([Certificate](#))

Yandex Practicum - Software Testing Engineer
([Certificate](#))

LANGUAGES

Russian - Native

English - B2

- Developed and maintained automated test cases for critical user flows
- Conduct API testing using Postman, validating request/response structures and business logic
- Validate data integrity using PostgreSQL and Django ORM for backend verification
- Worked closely with developers to reproduce, debug, and verify defects
- Contributed to CI/CD test execution using CircleCI

Scandiweb, Software Testing Engineer

Full-time | Jan 2023 - Jul 2023

Riga, Latvia | Remote

- Performed functional and exploratory manual testing for multiple e-commerce projects built on Magento (PHP backend) with various frontend technologies including Angular, React, and Vue
- Worked on projects at both active development and maintenance/support stages
- Validated core e-commerce flows such as product browsing, checkout, payments, and user account management
- Reported, reproduced, and verified defects
- Created and maintained test documentation, including test cases, checklists, and test reports
- Collaborated closely with product managers and developers to clarify requirements, discuss edge cases, and improve feature quality
- Participated in release testing and regression cycles for production-ready features
